Protective Insulation Blanket

Emergency Rescue Blanket (ERB)

An **Emergency Rescue Blanket (ERB)** is an especially low-weight, low-bulk blanket made of heat-reflective, thin, and metallized aluminium film. Silver in colour, it reflects more than 95% of radiated heat. The blanket is designed to retain warmth, and is both water resistant and windproof.

Size: 1.25m (Width) x 2.3m (Length)

Weight: 50gm±10

Packaging: 1 box (250pcs)

Protect Wrap

Protect Wrap high protection blanket is a cost effective, single use absorbent thermal wrap used in hospitals and by paramedics for the treatment and prevention of hypothermia and passive patient warming.

Size: Large (Above 12 years old)
1m (Width) x 2.3m (Length)

Weight: 260gm±10

Packaging: 1 box (60pcs)

Size: Medium (2 to 12 years old)
1m (Width) x 1.5m (Length)

Weight: 170gm±10

Packaging: 1 box (60pcs)

Baby Wrap

Baby Wrap blanket is a single use thermal wrap for babies and infants. Its function is to maintain baby's body heat whilst providing a barrier against bacteria. It is thermally retentive and prevents convective, evaporative, conductive and radiant heat loss. No fasteners or straps are required for ease of use.

Size: Small (Infant Baby)
0.8m (Width) x 0.8m (Length)

Weight: 90gm±10

Packaging: 1 box (60pcs)

Emergency Rescue Blanket (ERB)

Emergency Rescue Blanket is an especially low-weight, low-bulk blanket. Made of impermeable heat reflective material, it traps up to 90% of the radiated body heat that would normally be dispersed into the environment. It is used very effectively against heat loss through convection and keeps us warm with the body heat we generate. ERB is designed to arrest and stabilizes hypothermia, retain body temperature, water resistant and windproof.

Emergency Rescue Blanket is an essential item in any first aid kit. It is light weight and compact, portable and highly recommended to be included during travelling, hiking, camping and any adventurous activities. It provides vital warmth in the event of an emergency, or sudden weather change on the mountain. Lost campers and hikers have an additional benefit as the shiny metallic surface can be improvised as a distress signal for searches. Also commonly used by marathon runners to help stay warm at the end of a race.

Emergency Rescue Blanket is also a staple item for emergency first aid personnel, wilderness rescue responder, search and rescue and ambulance rescue team. Besides that, it can be used in hospital accident & emergency department, intensive care unit, operating theatres and recovery rooms to maintain normothermia in patients before, during and after any kind of surgery.

Features:

- Protects against extreme external temperatures
- Arrest and prevent hypothermia
- Retains warmth without outside heat source
- Lightweight, compact and portable – Suitable for hiking, traveling, camping, survival and adventurous activities
- High visibility and easily detectable
- Cost effective, inexpensive
- Wind and water proof

Protect Wrap Baby Wrap

Protect Wrap and **Baby Wrap** blanket is a high bulk protective blanket, made of air-laid tissues laminated to impermeable heat reflective material. It is highly absorbent on the inner side and waterproof on the outer, thermally retentive and prevents radiant heat lost through convection, evaporation and conduction. It is designed as a cost effective single use thermal wrap.

Protect Wrap blanket are designed to maintain body heat of patients. This single use blanket provides each patient with a secure clean thermal protection, free from contamination and protective barrier to bacteria. The blanket has no straps or other accessories for ease of use and is used entirely on its own, needing no other blanket or cover. Each product fully envelops the patient and insulates the body in extreme conditions.

Protect Wrap is an essential product in all hospitals for use by paramedic teams, for treatment and prevention of hypothermia and passive patient warming. It is also widely used in all critical care transfers and surgical procedures.

Baby Wrap blanket is designed for infants and babies to maintain the body heat whilst providing a protective barrier to bacteria. The blanket has no straps or other accessories for ease of use and is used entirely on its own, needing no other blanket or cover. Each blanket fully envelops the patient and the built-in hood ensures that the face is exposed. An essential product in all hospitals for use by pediatric and paramedic teams, for treatment and prevention of hypothermia and passive patient warming.

Features:

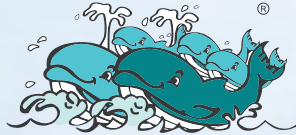

- Arrest and prevent/stabilizes hypothermia
- Fully enclose and insulate the body in extreme condition
- Prevent radiant heat loss through convection, conduction and evaporation
- Retain warmth without outside heat source
- Soft, comfortable and absorbent on the inside
- Wind and water proof exterior
- Reflects radiant heat back to patient
- Lightweight for easy handling & storage
- Single use, cost effective, inexpensive
